

GASTRO DETECT

Closing the gap between detection and diagnosis.

Boost Detection, Improve Outcomes.

How does Gastro Detect work?

When used alongside forceps biopsies, Gastro Detect significantly improves detection rates and provides a more definitive diagnosis.

- 01 Enhanced sampling**
Brush captures a larger surface area during biopsy.
- 02 Expert pathology review**
All samples are analyzed by APS Fellowship-Trained GI pathologists, experts in detecting Barrett's esophagus and dysplasia.
- 03 Improved detection**
Increased detection of Barrett's with a definitive diagnosis.

Why choose Gastro Detect?

Improved Sampling / Advanced Diagnostic Accuracy

Forceps biopsies: Sampling a smaller surface area increases the risk of missed detection.

Gastro Detect + forceps biopsies: Enables physicians to sample a larger area more effectively, improving diagnostic accuracy.

Perfect adherence to current biopsy guidelines will still sample only 5% to 10% of the BE surface mucosa, particularly in longer segments.
